

ABSTRACT

It is an object that the number of elements for use in active drive of organic EL element can be reduced, etc. An organic EL laminate type organic switching element according to the present invention has a control electrode (6) provided to which a control signal line for controlling the emission/nonemission condition of the organic EL element part (20) is electrically connected, wherein an organic EL element part (20) and an organic switching element part (30) are laminated on each other.
